HS	At bedtime	Tab	Tablet
Cap	Capsule	Syp	Syrup

What is a generic medicine?

A generic medicine contains the same active ingredient, in the same dosage and form, as the branded version. CDSCO (India's drug regulator) certifies them as bioequivalent — meaning they work the same way in your body. The price difference is because you're not paying for the brand name, marketing, or packaging.

What is a drug interaction?

When two medicines affect each other — one might reduce the other's effectiveness, or together they might increase the risk of side effects. Your doctor may have prescribed them intentionally, but it's always worth confirming at your next visit.
